

Source: Morningstar Direct, as of 9/30/25. The Russell Midcap Index tracks the performance of approximately 800 mid-cap companies in the United States. The Russell 2000 Index tracks the performance of approximately 2,000 small-cap companies in the United States. The Russell 1000 Index tracks the performance of approximately 1,000 large-cap companies in the United States. JHMM vs. index chart: Standard deviation is a statistical measure of the historic volatility of a portfolio. It measures the fluctuation of a fund's periodic returns from the mean or average. The larger the deviation, the larger the standard deviation and the higher the risk. Sharpe ratio is a measure of excess return per unit of risk, as defined by standard deviation. A higher Sharpe ratio suggests better risk-adjusted performance. For index descriptions and methodology for John Hancock Multifactor ETFs, please visit [us.dimensional.com/john-hancock-indexes](https://us.dimensional.com/john-hancock-indexes). It is not possible to invest directly in an index. Past performance does not guarantee future results.

# John Hancock Multifactor Mid Cap ETF (JHMM) has demonstrated strong risk-adjusted performance

## JHMM vs. index comparison

Risk, return, and Sharpe ratio, 12/1/20–9/30/25 (%)

■ JHMM ■ Russell Midcap Index ■ CRSP U.S. Mid Cap Index  
■ Morningstar mid-cap blend fund category ■ S&P 400 MidCap Index

The benchmark shown demonstrates how the fund's performance compares against the returns of similar investments, which may differ from the broad-based securities index shown in the fund's prospectus.

**The past performance shown here reflects reinvested distributions and the beneficial effect of any expense reductions, and does not guarantee future results. Returns for periods shorter than one year are cumulative. Shares will fluctuate in value and, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance cited. For the most recent month-end performance, visit [jhinvestments.com/etf](https://jhinvestments.com/etf).**

Market performance is determined using the bid/ask midpoint at 4 P.M., Eastern time, when the NAV is typically calculated; your returns may differ if you traded shares at other times. NAV is calculated by dividing the total value of all the securities in the fund's portfolio plus cash, interest, and receivables, minus any liabilities, by the number of fund shares outstanding.

Standard deviation is a statistical measure of the historic volatility of a portfolio. It measures the fluctuation of a fund's periodic returns from the mean or average. The larger the deviation, the larger the standard deviation and the higher the risk.

**1** The net expense ratio for JHMM is 0.42%, which represents the effect of a fee waiver and/or expense reimbursement and is subject to change. The gross expense ratio is 0.42%. The fund's Morningstar category average is a group of funds with similar investment objectives and strategies and is the equal-weighted return of all funds per category. Please see index definitions on page 1. You cannot invest directly in an index. The index shown demonstrates how the fund's performance compares against the returns of similar investments, which may differ from the broad-based securities index shown in the fund's prospectus.

*Investing involves risks, including the potential loss of principal. There is no guarantee that a fund's investment strategy will be successful. The stock prices of midsize and small companies can change more frequently and dramatically than those of large companies, and value stocks may decline in price. Shares may trade at a premium or discount to their NAV in the secondary market, and a fund's holdings and returns may deviate from those of its index. These variations may be greater when markets are volatile or subject to unusual conditions. Errors in the construction or calculation of a fund's index may occur from time to time. Please see the fund's prospectus for additional risks.*
